D'Alembert system – simple and effective

If you are looking for an easy to use roulette system for which you don't have to think too much about how you play, then you will benefit from taking a closer look at the D'Alembert system. The basic play strategy is as follows: you raise your bet if you lose and reduce it when you win. In the long term your results will thus be 50/50.

How do you play the D'Alembert system?

As with many other roulette systems, in the D'Alembert system you choose bets on red/black, even/odd or 1-18/19-36. In fact, this clever method boils down to: If you lose, increase your bet by 1 unit. If you win, reduce your bet by 1 unit. For example, you start with a bet of € 5 and you lose this, then bet € 10 on your next spin. If you win this, you play the next spin at € 5 again. As is the case in Martingale, this system gives you a considerable number of turns in which you can make a little bit of profit, compared to a small number of betting chances in which you risk (bigger) losses.

D'Alembert system – history

This system that is commonly used when playing roulette in a casino, was created in the 18th century by the French mathematician Jean Baptiste le Rond d'Alembert. It is designed so that players can win but also protect their budget against losses at the same time. And the good thing is: you don't need to be an advanced roulette player to use this strategy. Even though it has been created by a mathematician, you do not need to do any special calculations or monitor the numbers that come up very closely.

The secret of the D'Alembert system

The D'Alembert system is also known as one of the safest methods of playing roulette. Why is it that many roulette players choose this system when they want to increase their chances of winning? The secret lies simply in the fact that, as a player you take as little risk as possible after you have won a bet.

To many players it will feel strange to take a step back after winning a round. In fact, most players find this an extremely hard thing to do! However, this really is a very sensible way to protect your earnings.

There is actually a very logical statement that is of course crucial for every player to keep in mind: "know when to stop"!
